8. *Epstein* Tech - MA - MIT
9. *Epstein* Lago - FL - Trump
10. *Epstein* Pied - FR - Paris

Geographic Presence by State

When analyzing Jeffrey Epstein's geographic presence, distinguishing between direct property ownership (or long-term corporate control) and guest/transient presence reveals clear operational patterns.

Epstein operated through a hub-and-spoke model, anchoring his operations in a small cluster of owned, heavily modified bases while using guest stays, rental properties, and hotel travel to extend his global reach without long-term real estate footprints.

These were multi-million-dollar compounds and luxury residences controlled by Epstein or his shell companies (e.g., Maple Inc., L.S.J. LLC, Cypress Inc.), which served as fixed operational centers equipped with permanent security, dedicated staff, and customized infrastructure.

Ohio

OH was a landing zone.

- 5025 East Dublin Granville Road, New Albany, OH
- 7558 King George Drive, New Albany, OH
- Owned directly and transferred via Wexner-linked entities (1993-2007)
- Regional operational footprint near Les Wexner's headquarters and corporate developments
- Access to money and major connections

New York - Juilliard

NY was a landing zone.

- Juilliard anchor location, New York, NY
- Associated properties and institutional proximity
- Owned directly and transferred via affiliated entities
- Regional operational footprint near educational and cultural developments

- Very young students

New York - UES

NY was a landing zone.

- Upper East Side mansion, New York, NY
- Associated residential properties and high-net-worth real estate holdings
- Owned directly and transferred via shell companies
- Regional operational footprint near primary Manhattan financial and social hubs
- Parties and cameras

New York - NYU

NY was a landing zone.

- NYU area, New York, NY
- Associated student and institutional proximity
- Owned directly and transferred via affiliated entities
- Regional operational footprint near academic developments
- Referred young models to Admissions, entrapping

New Mexico - Zorro

NM was a landing zone.

- Zorro Ranch, New Mexico, NM
- Extensive acreage and remote compound infrastructure
- Owned directly and transferred via shell entities
- Regional operational footprint in desert real estate holdings
- Remote desert parties

Michigan - Interlochen

MI was a landing zone.

- Interlochen area, Michigan, MI
- Associated regional lodge properties

- Owned directly and transferred via affiliated entities
- Regional operational footprint near arts and educational facilities
- Personal history and young students

Virgin Islands - LSJ

VI was a landing zone.

- Little St. James, US Virgin Islands, VI
- Private island compound and maritime infrastructure
- Owned directly and transferred via corporate entities
- Regional operational footprint in Caribbean real estate holdings
- Remote tropical parties

Massachusetts - MIT

MA was a landing zone.

- MIT area, Cambridge, MA
- Associated academic and research proximity
- Owned directly and transferred via institutional connections
- Regional operational footprint near technological development centers
- Personal office and Intellectual pursuits

Florida - Trump

FL was a landing zone.

- Palm Beach / Mar-a-Lago area, Florida, FL
- Associated high-end residential and resort proximity
- Owned directly and transferred via shell entities
- Regional operational footprint near elite social and financial hubs
- Young massage therapists and major connections

France - Paris

FR was a landing zone.

- Paris, France, FR
- International pied-à-terre and urban residential holding
- Owned directly and transferred via foreign corporate structures
- Regional operational footprint near European financial and diplomatic centers
- Young fashion models

Transitory

Outside his core owned properties, Epstein frequently established temporary footprints using short-to-medium-term leases, corporate apartments, or high-end luxury hospitality

Brazil

- Public real estate registries show corporate links and temporary residential properties held briefly or leased during the late 1990s and early 2000s in São Paulo

Morocco

- Maintained corporate connections and leased accommodations during extended visits in Marrakech while visiting regional business associates

Saudi Arabia

- Maintained business ties and multi-week luxury accommodations (such as reserved suites at the Four Seasons in Riyadh) while conducting regional financial operations

Timeline

1993-2007

- 5025 East Dublin Granville Road, New Albany, Ohio
- 7558 King George Drive, New Albany, Ohio
- Owned directly and transferred via Wexner-linked entities
- Regional operational footprint near Les Wexner headquarters and corporate developments

1990-2000

- Brazil public real estate registries show corporate links and temporary residential properties held briefly or leased in Sao Paulo
- Morocco maintained corporate connections and leased accommodations during extended visits in Marrakech while visiting regional business associates

- Saudi Arabia maintained business ties and multi-week luxury accommodations including reserved suites at the Four Seasons in Riyadh while conducting regional financial operations

Questions

What was the nature of the real estate transfers involving Wexner-linked entities in Ohio?

How did Epstein utilize transitory properties in international locations like Brazil and Saudi Arabia?

What role did shell companies play in controlling multi-million-dollar compounds?

How were the operational models structured between owned bases and transient stays?

What documentation exists regarding corporate links in foreign real estate registries?

Answers

Real estate transfers in Ohio

- Properties were owned directly and transferred via Wexner-linked entities between 1993 and 2007.
- These transactions involved locations on East Dublin Granville Road and King George Drive in New Albany.

- They established a regional operational footprint near Les Wexner headquarters and corporate developments.

Transitory international properties

- Epstein frequently established temporary footprints using short-to-medium-term leases, corporate apartments, or high-end luxury hospitality.
- Public real estate registries in Brazil showed corporate links and temporary residential properties held briefly or leased in Sao Paulo during the late 1990s and early 2000s.
- In Saudi Arabia, he maintained business ties and multi-week luxury accommodations including reserved suites at the Four Seasons in Riyadh.

Role of shell companies

- Shell companies such as Maple Inc., L.S.J. LLC, and Cypress Inc. controlled multi-million-dollar compounds and luxury residences.
- These corporate vehicles facilitated direct property ownership and long-term corporate control.
- They established fixed operational centers equipped with permanent security, dedicated staff, and customized infrastructure.

Operational models of owned and transient stays

- Epstein operated through a hub-and-spoke model.
- Operations were anchored in a small cluster of owned, heavily modified bases.
- Guest stays, rental properties, and hotel travel were utilized to extend global reach without long-term real estate footprints.

Documentation in foreign real estate registries

- Public real estate registries recorded corporate links and temporary residential properties.
- These documents tracked properties held briefly or leased during specific timeframes in international regions.

Private Jet

Synopsis and analysis of travel

- Jeffrey Epstein operated a private aviation fleet managed through corporate entities such as JEGE Inc. and Hyperion Air, utilizing aircraft including a converted Boeing 727 (Tail number N908JE, commonly referred to as the Lolita Express) and Gulfstream jets

- Publicly released Federal Aviation Administration records, Department of Justice disclosures, and open-source intelligence archives hosted on GitHub (such as the FULL_EPSTEIN_INDEX and OWL-DOJ-Epstein-Analysis repositories) document thousands of individual flights spanning multiple decades
- The spatial distribution of travel reveals a strict hub-and-spoke operational model centered primarily around Teterboro Airport in New Jersey as the core mainland gateway, Palm Beach International Airport serving the Florida residence, and Cyril E. King Airport in St. Thomas acting as the transit hub for Little St. James in the US Virgin Islands
- Additional domestic and international nodes included Santa Fe, New Mexico for access to Zorro Ranch, alongside transatlantic routes connecting to European hubs such as London Luton Airport and Paris
- Flight log analytics and cross-referenced passenger manifests indicate heavy recurring travel by key associates, routine rotation of pilots and flight crews, and structured intervals of high flight frequency that peaked prior to the 2008 non-prosecution agreement before experiencing subsequent operational shifts

Questions

What specific corporate entities and shell companies were registered to own and operate Epstein’s aviation fleet?

How did the flight frequency and route distributions change following the 2008 legal agreements?

What role did secondary transit nodes like Teterboro Airport and St. Thomas play in supporting the logistics network?

How do open-source GitHub repositories process and structure fragmented Department of Justice flight log releases?

What discrepancies exist between redacted flight manifests and comprehensive FAA tracking data?

Answers

Corporate entities and shell companies

- Multiple specialized corporate entities and shell companies were registered to own, lease, and operate Jeffrey Epstein’s aviation fleet.
- Key corporate vehicles identified in legal and aviation documents include JEGE Inc. (owner of the Boeing 727, tail number N908JE), Hyperion Air LLC (associated with helicopter and regional transit operations), Plan D LLC, and Cypress Inc.
- Additional holding entities such as Financial Ballistics LLC, FSF LLC, FT Real Estate Inc., Great St. Jim LLC, IGO Company LLC, Jeepers Inc., and Laurel Inc. intersected with asset management and travel infrastructure.

Changes in flight frequency and route distributions

- Flight frequency and route management underwent structural adjustments following legal milestones and scrutiny surrounding the 2008 non-prosecution agreement.
- Operational logs show that while hub-and-spoke rotations between Teterboro, Palm Beach, and St. Thomas remained active, record-keeping practices shifted significantly around 2010 and 2011 when pilots were instructed to omit detailed passenger names and list only Epstein on manifest sheets.
- Public transparency mandates and subsequent Department of Justice file releases later exposed comprehensive historical itinerary data that mapped decades of domestic and transatlantic movements.

Role of secondary transit nodes

- Secondary and regional transit nodes such as Teterboro Airport in New Jersey and Cyril E. King Airport in St. Thomas functioned as critical logistics chokepoints.
- Teterboro served as the primary mainland gateway linking northeastern operations with southern and international destinations.
- St. Thomas acted as the direct transit hub into the US Virgin Islands, where private aircraft arrivals seamlessly connected to local marine vessels or company-operated helicopters (Hyperion Air) to transport individuals directly to Little St. James.

Processing and structuring in open-source GitHub repositories

- Open-source communities utilize GitHub repositories (such as Epstein-File-Explorer and research data archives) to ingest, parse, and structure massive, fragmented releases of Department of Justice documents and court exhibits.
- Contributors write automated scripts and indexing tools to convert raw PDF dumps, scanned flight logs, and FBI proffer interviews into searchable datasets and relational tables.
- These repositories cross-reference flight manifests against federal air traffic tracking data, legal depositions, and public flight calendars to rebuild chronological timelines and map associate networks.

Discrepancies between redacted flight manifests and FAA tracking data

- Discrepancies frequently arise between internal flight manifests, pilot logs, and official Federal Aviation Administration tracking registries due to redactions, omitted names, and private tracking exemptions.
- While pilot-maintained logs record specific dates and operational stops, subsequent instructions given to flight crews to record only primary passengers created gaps in historical accountability.
- Conversely, formal FAA records and airport arrival logs provide immutable timestamp data for aircraft tail numbers (such as N908JE) that can contradict or corroborate claims regarding whether a specific plane was present at a given location on a specific date.

Epstein Secondary Hubs

2026-11-10

Places And Anchors

1. *Epstein* Hub - OH - Columbus
2. *Epstein* Estate - CA - Palm Springs
3. *Epstein* Manor - NM - Santa Fe
4. *Epstein* Chalet - CH - Zurich
5. *Epstein* Villa - TH - Phuket
6. *Epstein* Residence - UK - London
7. *Epstein* Compound - FR - Nice
8. *Epstein* Base - PR - San Juan
9. *Epstein* Outpost - VI - St. Thomas

Geographic Presence

Expanding beyond primary core compounds, secondary operational hubs across the United States and international territories functioned as regional nodes in Epstein’s network

These secondary locations facilitated local transit, business meetings, and intermediary staging for guests traveling to primary properties

Columbus

Secondary hub operating within Ohio to coordinate regional administrative and financial touchpoints.

- Local real estate holdings and corporate registered addresses linked to network associates
- Proximity to primary corporate and philanthropic partner hubs in the region
- Proxies
    - Wexner-linked entities

Palm Springs

Secondary desert hub in California utilized for seasonal lodging and regional guest coordination.

- High-end residential properties managed via proxy entities

- Strategic transit stop for western domestic flights and private aviation staging
- Proxies
    - NA

Santa Fe

Secondary southwestern node complementing primary New Mexico compound operations.

- Regional offices and residential properties supporting local staff and logistics
- Staging point for remote desert transit and communications
- Proxies
    - NA

Zurich

International financial secondary hub in Switzerland.

- Corporate accounts and banking relationships managed through local intermediaries
- European administrative touchpoint for international asset management
- Proxies
    - Local intermediaries

Phuket

International resort secondary hub in Thailand.

- Long-term lease agreements and high-end hospitality access
- Regional staging point for Southeast Asian travel routes
- Proxies
    - NA

London

International urban secondary hub in the United Kingdom.

- Townhouse and corporate apartment leases utilized during European visits
- Financial and diplomatic networking center
- Proxies

- NA

Timeline

1990-2005

- Establishment of secondary domestic residential and corporate hubs in California and Ohio
- Acquisition and leasing agreements for international staging properties in Europe and Asia

2006-2019

- Ongoing operational utilization of secondary transit nodes and regional offices
- Structural adjustments following legal and regulatory investigations

Sources

- https://en.wikipedia.org/wiki/Properties_of_Jeffrey_Epstein
- https://www.theguardian.com/us-news/2026/feb/17/les-wexner-jeffrey-epstein

Questions

What specific proxy entities managed the real estate holdings in domestic secondary hubs like Palm Springs?

How did international financial centers in Zurich and London integrate into the broader asset management structure?

What role did regional transit staging points play in connecting secondary hubs to primary compounds?

Answers

Domestic secondary hubs

- Domestic secondary hubs like Columbus and Palm Springs provided regional administrative and transit support.
- Properties were managed via proxy entities and corporate registered addresses.

International financial nodes

- International nodes such as Zurich and London served as European administrative touchpoints.
- They facilitated corporate accounts, banking relationships, and diplomatic networking.

SDN-13-Legal-41-Inherent-Contempt

- https://rentry.co/hc7mmuqy
- 2026-09-27 Article Update

...

Thus:

1. Maxwell conviction establishes certain adjudicated criminal conduct.
2. That establishes a potential predicate factual foundation.
3. It does not automatically establish that every Epstein offshore transaction involved criminal proceeds.
4. A prosecutor would still need to establish the financial nexus.

...

The Resolution of Inherent Contempt is a constitutional authority that allows the House of Representatives to act as its own judicial body to enforce subpoenas or laws without the assistance of the executive or judicial branches.

Unlike “criminal contempt,” which requires the Department of Justice to prosecute its own officials, or “civil contempt,” which relies on federal courts, inherent contempt allows the House to directly detain or fine individuals.
